Appendix B: Y2K

Year 2000 compliant systems must be able to accurately process date data including, but not limited to, calculating, comparing and sequencing from, into and between the 20th and 21st centuries, including leap year calculations. The main phases of Y2K compliance are as follows:

Phase	Description
Assessment	Assess Y2K impact, conduct detail analysis, and collect inventory data
Renovation	Modify systems to meet Y2K compliance requirement
Validation	Test, certify, and accredit system to ensure Y2K compliance
Implementation	Place Y2K compliant systems into production

The system names used by our Y2K validation staffs do not necessarily match the names used by the program areas for systems described in the Operational IT Plan. The Y2K team selected and named systems using their own criteria to suit their specific require-ments. In the tables that follow, we have identified those systems targeted for Y2K accreditation and correlated them with systems described in the Operational IT Plan, linking the Y2K system names with the ones used in this Plan.
